

Ivan Yuri “Lion” P. De Leon

Pasig City, Philippines | deleon.ivanyuri@gmail.com | [thelionlies.github.io](https://github.com/thelionlies) | linkedin.com/in/ivan-yuri-de-leon/

EDUCATION

Ateneo de Manila University

Master in Data Science

Quezon City, Philippines

May 2026

- Graduate Assistant – Mathematics Department & Environmental Science Department
- *Coursework:* Deep Learning, Computer Vision, Bayesian Techniques, Time Series Forecasting, Big Data Systems

Ateneo de Manila University

BS in Applied Mathematics (Data Science), Minor in Economics

Quezon City, Philippines

May 2025

- **Summa Cum Laude;** University Academic Scholar (100% Tuition); DOST Scholar (national government scholarship)
- **Mulry Award Recipient** – highest distinction for literary excellence and service
- **Managing Editor & Finance Officer**, HEIGHTS Ateneo (official literary & artistic publication)
- *Coursework:* Machine Learning, Introduction to AI, Natural Language Processing, Operations Research, Business Intelligence, Statistics, Discrete Mathematics, Graph Theory, Linguistics

EXTENDED EDUCATION

PSI AI Academy

AI/LLM Engineering for Software Developers

Remote

Feb 2026

- Completed coursework on RAG, Agentic Systems, Fine-Tuning, Reasoning Models, Guardrailng, and Multimodal Models.
- Delivered a final project developing a chatbot assistant for Ateneo students implementing a multi-agent framework.

TARA Program

Technical Alignment Research Accelerator for the Asia-Pacific Region

Remote

Jun 2026

- *Participates* in a regional cohort with peers from Singapore, Japan, and Australia, completing coursework on transformer architectures, mechanistic interpretability, reinforcement learning, and model evaluation techniques.

EXPERIENCE

Ayala Corporation

Data Analytics and AI Intern

Makati, Philippines

Apr 2025 - Sept 2025

- Led a cross-functional initiative with Ayala Corp and AC Mobility teams to identify key car sales drivers using predictive and causal models, informing a promo-effectiveness metric and improving sales forecasting.
- Assisted the HR team by analyzing attrition and leave data for 200+ employees and developing a real-time workforce dashboard, reducing report generation time from monthly to instant.
- Modeled user behavior for 5,000+ early adopters in a mobility app using Markov chains and Monte Carlo methods, generating actionable insights that guided feature prioritization.
- Supported data engineering processes, including large-scale querying, preprocessing, and quality control.

Bank of the Philippine Islands

Data Science Intern

Makati, Philippines

Jun 2024 - Aug 2024

- Delivered 4 finance-focused data projects, covering market data scraping, product recommendation systems, customer segmentation for tailored service delivery, and explainable AI for credit risk modeling.
- **Finalist (3/20 teams)** in a case competition across multiple companies under the conglomerate, collaborating with five senior leaders to design an innovation-driven solution impacting 10,000+ employees.

Nara Institute of Science and Technology

Research Intern

Nara, Japan

Jan 2026

- Developed a cultural recognition benchmark for Vision-Language Models, producing reproducible datasets for AI evaluation.

PROJECTS

Graph-Based Analysis of Customer-Merchant Payment Networks

Master's Capstone

2026

- Developed a novel metric capturing merchant importance to individual customers, independent of overall merchant popularity, and applied it to analyze payment networks using graph metrics, community detection, and graph neural networks.

FIES Viewer – Django-Based Socioeconomic Data Platform

Course Project

2026

- Enables interactive exploration of household income and expenditure data using Django, with filtering, searching, CRUD operations, and aggregated provincial statistics for accurate regional insights.

Advancing Diacritic Restoration for Tagalog Homographs

Undergraduate Thesis

2025

- Designed and trained custom deep learning models for Tagalog diacritic restoration to disambiguate words with multiple meanings, introducing a *masked language modeling* approach to enhance text understanding for digital applications.

OTHER DETAILS

- **Programs & Tools:** Python (Scikit-learn, PyTorch), R, SQL, Power BI, Google Cloud Platform, Java, Git, Django, Streamlit
- **Data Skills:** NLP, Machine Learning, Deep Learning, Network Analysis, Time Series Analysis, Visualization, Web Scraping
- Philippine Junior Data Science Competition 2024 – Top 20% (11/60 teams)
